Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This Office Action is in response to the Amendment filed September 3, 2002.
 The finality of the Office Action mailed July 3, 2002 has been withdrawn.

Claim 7 is canceled.

Claims 1-6 and 8-9 are pending.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims1-6 and 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jin et al. (U.S. 5,883,001) in view of Wilson et al. (U.S. 4,943,359) (of record).

Jin et al. teaches a contact opening in a dielectric layer extending from an upper surface of the dielectric layer to a metal-containing conductive pad having substantially parallel sidewalls (Fig. 8, col. 7, lines 29-31, 45-49). Jin et al. teaches a contact opening in a dielectric layer and a barrier layer, the semiconductor substrate having a metal-containing conductive pad under the dielectric layer and the barrier layer. Jin et al. also shows the residues being removed from the contact opening (residues free) (Fig. 8, col. 2, lines 55-60, col. 7, lines 45-49). In addition, Jin et al. teaches employing a fluorine-containing compound (col. 7, lines 49-50).

Jin et al. does not specifically show removing the residues by applying nitric acid and phosphoric acid. However, Wilson et al. shows that the use of nitric acid and

Application/Control Number: 09/645,903

Art Unit: 2822

Page 3

phosphoric acid for the removing of residues is well known in the art (col. 4, lines 35-38).

Furthermore, product-by-process claims are limited and defined by the process; determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior art product was made by a different process. *In re Hirao and Sato et al.*, 190 USPQ 15 at 17 (CCPA 1976) (footnote 3). See also *In re Brown and Saffer*, 173 USPQ 685 (CCPA 1972): *In re Luck and Gainer*, 177 USPQ 523 (CCPA 1973); In re Fessmann, 180 USPQ 324 (CCPA 1974); *In re Marosi et al.*, 218 USPQ 289 (CAFC 1983); In re Thorpe, 777F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention that the structure taught by Jin et al. would correspond with the structure claimed.

Response to Arguments

3. Applicant's arguments with respect to claims 1-6 and 8-9 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lee et al. (U.S. 5,872,061) and Wojnarowski et al. (U.S.

Application/Control Number: 09/645,903

Art Unit: 2822

5,302,547) teach a contact opening in a dielectric layer extending from an upper surface

of the dielectric layer to a metal-containing conductive pad.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Maria Guerrero whose telephone number is 703-305-

0162.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Carl Whitehead Jr. can be reached on 703-308-4940. The fax phone

numbers for the organization where this application or proceeding is assigned are 703-

308-7722 for regular communications and 703-308-7724 for After Final

communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-308-

0956.
